

For Sale

1/4 Scale Ryan ST with +/- 90" wing span

It's very close to being ready to cover. It appears to be built from a plan in the September, 1960 Model Airplane News and is built by an excellent builder. At this point it can be either powered by a fuel or electric motor.

It has five servos and working oleo's on the landing gear. All of the control horns are internally hidden including the flaps. The wheel pants, landing gear fairings and a really nice fiberglass cowl are included, plus a box of misc. goodies.

I'm selling this for a friend of mine and he'd like \$200.00 for it.
